Portfolio: https://sanjay-protfolio.netlify.app/

Professional Summary

Full Stack Java Developer with around 5 years of experience developing enterprise applications using Java (8 / 11 / 17), Spring Boot, Microservices, and Spring WebFlux. Experienced in building RESTful APIs and scalable backend services with strong knowledge of Spring IoC, Dependency Injection, and secure API development using Spring Security and JWT-based authentication. Proficient in developing Single Page Applications using ReactJS, Angular, RxJS, and Vanilla JavaScript, with experience in PostgreSQL, MySQL, MongoDB, and Redis. Experienced in deploying cloud-native applications on AWS (EC2, S3, Lambda, API Gateway, RDS) and implementing unit and integration testing using JUnit and Mockito to ensure application reliability. Familiar with Generative AI API integration, prompt engineering, and tuning LLM responses based on application requirements.

Technical Skills

Languages	Java (8 / 11 / 17 / 21), SQL, PL/SQL, NoSQL, Python
Frontend	Angular, TypeScript, JavaScript, RxJS, NgRx, Angular Material, ReactJS, HTML5, CSS3, Bootstrap, PrimeNG, Tailwind CSS
Backend	Spring Boot, Spring WebFlux, Spring Security, Hibernate, JPA, Microservices, REST APIs, GraphQL
Messaging & Streaming	Apache Kafka, RabbitMQ, gRPC
Databases	MySQL, Oracle, PostgreSQL, MongoDB, Redis, Cassandra, DynamoDB, AWS RDS, Aurora
Cloud Technologies	AWS (EC2, S3, Lambda, API Gateway, DynamoDB, EKS, RDS, IAM, SNS, SQS, Fargate), Microsoft Azure, Google Cloud Platform, Pivotal Cloud Foundry
DevOps / Tools	Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD, Terraform, ArgoCD, Prometheus, Grafana, ELK Stack, OpenTelemetry, Maven, Gradle, SonarQube
Testing	JUnit 5, Mockito, Selenium, Postman, Swagger
AI / ML & GenAI	Machine Learning & Deep Learning Concepts, Python ML Libraries (NumPy, Pandas, Scikit-learn), Generative AI, LLM API Integration, Prompt Engineering
Methodologies	Agile (Scrum), TDD, BDD, DDD, Secure SDLC

Professional Experience:

Client: Northern Trust **Aug 2024 - Present**
Role: Java Full Stack Developer (React)
Location: Wilmington, USA
Responsibilities:

- Developed scalable **credit risk microservices** using **Java 17/21, Spring Boot, Spring WebFlux, Hibernate, and JPA**, enabling efficient loan processing and borrower risk evaluation services.
- Integrated **third-party credit bureau APIs** to retrieve borrower credit scores and financial transaction history, supporting automated **loan eligibility assessment and credit risk analysis**.
- Designed backend services to compute **borrower risk scores, loan eligibility, and dynamic interest calculations**, implementing **event-driven architecture using Apache Kafka and RabbitMQ** for asynchronous processing.
- Implemented **secure REST APIs** using **Spring Security with JWT-based authentication and role-based access control (RBAC)**, ensuring secure access to sensitive borrower and financial data across microservices.
- Built interactive **credit risk dashboards** using **ReactJS, TypeScript, HTML5, CSS3, and Bootstrap**, enabling analysts to monitor borrower profiles, loan activity, and financial risk indicators.
- Developed **reusable React components and modular UI services**, improving frontend maintainability and reducing duplicated UI logic across analytics dashboards.
- Optimized **backend performance** by reducing redundant API calls and improving service-layer data handling, improving response times for credit risk evaluation services.
- Deployed applications on **AWS infrastructure (EC2, S3, Lambda, API Gateway, RDS, DynamoDB)**, supporting scalable **cloud-native financial services**.

- Supported **DevOps practices** by implementing **CI/CD pipelines using Jenkins, Docker, and Git**, enabling automated build, testing, and deployment of microservices across environments.
- Integrated **Generative AI APIs and Large Language Models (LLMs)** to analyze borrower financial data and generate automated **credit risk insights**, applying **prompt engineering techniques** to improve response quality for analyst workflows.

Environment:

Java 17/21, Spring Boot, Spring WebFlux, Spring Security, Hibernate, JPA, ReactJS, RxJS, TypeScript, Apache Kafka, RabbitMQ, AWS (EC2, S3, Lambda, API Gateway, RDS, DynamoDB), Docker, Jenkins, Git, JUnit, Mockito, Generative AI APIs, Large Language Models (LLMs)

Client: MyHealth1st **May 2020 - Aug 2023**
Role: Java Full Stack Developer
Location: Hyderabad, India
Responsibilities:

- Developed **backend healthcare services** using **Java, Spring Boot, Spring MVC, Hibernate, and JPA**, supporting patient registration, appointment scheduling, and telehealth consultations.
- Implemented **dynamic appointment slot management**, automatically blocking available time slots when patients proceed to payment to prevent **double bookings**.
- Designed and developed a **doctor management platform from scratch**, enabling doctors to manage schedules, appointments, and availability while synchronizing updates dynamically with the main patient application.
- Reused and integrated **shared UI modules** between the main patient portal and doctor portal, reducing development effort and ensuring **consistent user experience** across both systems.
- Built responsive **patient and provider dashboards** using **Angular, TypeScript, HTML5, CSS3, and Bootstrap**, enabling users to schedule consultations and manage appointment history.
- Integrated a **chatbot-based enquiry system** using **Java, Spring Boot APIs, and Apache Kafka**, enabling dynamic message handling for appointment queries and doctor availability requests.
- Improved **system performance** by implementing **Redis caching** and optimized API request handling, reducing repeated database queries and improving response times.
- Implemented **CI/CD pipelines** using **Jenkins, Maven, and Git**, enabling automated builds, testing, and deployment of healthcare services.
- Conducted **technical mentoring and training sessions** for junior developers, guiding them on **Spring Boot development, API design practices, and code quality standards**.

Environment:

Java 17/21, Spring, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Apache Tomcat, Angular, TypeScript, HTML5, CSS3, Bootstrap, Apache Kafka, Redis, MySQL, MongoDB, AWS (EC2, S3, RDS, API Gateway), Jenkins, Maven, Git, JUnit, Mockito

EDUCATION:

DePaul University **Chicago, IL**
Master of Science in Data Science Sep 2023 – May 2025

Sree Vidyanikethan Engineering College **Andhra Pradesh, India**
Bachelor of Technology in Computer Science and System Engineering June 2018 – May 2022
